WHAT ARE ESSENTIAL OILS?

An Essential Oil is the fragrant life essence of a plant which has been gently extracted through the process of steam distillation or cold pressing. This purely extracted oil is then used to support an individual's needs.

QUALITY MATTERS.

Youngevity delivers only the purest, authentic essential oils from the most respected and ethical distillers. Many of our oils come directly from families that have been distilling for more than one hundred years. They use steam distillation or cold pressing with time-honored, non-destructive techniques to extract and preserve the integrity of each essence.

YOUNGEVITY ESSENTIAL OILS ARE:

- 100% pure, essential oils
- Organic, wild-crafted or ethically farmed
- Produced with the highest standard of quality and safety
- Free of additives, extenders or chemicals
- Not derived from animal products or associated with animal testing

ESSENTIAL OIL APPLICATIONS

AROMATICALLY

This is the most common way oils are used. Mix 1-2 drops with a carrier oil in hands and inhale, or use one of our diffusers.

TOPICALLY

Apply diluted essential oils to areas of concerns or apply to the feet as they possess one of the highest concentrations of pores in the entire body, providing fast absorption and delivery.

NOTE: Essential Oils should not be applied directly to skin but diluted with carrier oils, bath salts, or through diffusing in the air.

System support indicated by C-Circulatory, D-Digestive, E-Endocrine, I-Immune, L-Lymphatic, M-Muscular, N-Nervous, RP-Reproductive, RS-Respiratory, SK-Skeletal, SN-Skin, U-Urinary.

THERE'S MORE!

This catalog features just some of our best-selling oils. To see the full assortment, please visit Youngevity.com.

FOR EVERYDAY APPLICATION

Some essential oils are too potent to be applied to the skin directly. Blend essential oils with a carrier oil so they can be applied safely. Carrier oils help to “carry” essential oils onto the skin and dilute essential oils to cover large areas of the body.

HOW IT WORKS.

Inhalation is one of the most powerful ways essential oils can be absorbed by the body. Without needing to pass through your skin's thick exterior or the acidic environment of your stomach, essential oils can be directly absorbed into your bloodstream using the powerful pathways of the respiratory system.

The discrete and ultra-portable Breathe Essentially diffuser provides a consistent supply of essential oils during use. A medical grade plastic nosepiece holds oil infused wicks directly beneath the nostrils.

Just inhale, and breathe in wellness.
